DEAN G. MARTIN  
VICE-PRESIDENT

Honeoye Falls, New York

RALPH E. MARTIN  
SECRETARY

January 24, 1963

To our customers and friends:

When Winter comes, can Spring be far behind?

We offer in this Price List the highest quality of Farm Seeds that can be obtained and varieties that are adapted to our Northeastern farms.

The Policy of Our Company is Plain and Simple—to furnish Farm Seeds that we are proud to sow ourselves.

We can supply all seeds except potatoes at once or as you may direct, and can hold potatoes until weather conditions are favorable, or we will book your order to be called for at our warehouse.

Come see us or order by mail. No order is too small.  
Remember—Farm Seeds For Farm Needs in 1963.

Sincerely yours,

EDWARD F. DIBBLE SEEDGROWER

*Harwood Martin*  
Harwood Martin, President

## Conditions of Sale

We assume responsibility that the seeds or tubers reach the purchaser in good condition. We offer to refund the purchase price of any seeds or tubers found by tests to be unsatisfactory to you within ten days after the seeds or tubers reach you. In common with all responsible seedsmen "The Edward F. Dibble Seedgrowing company warrants to the extent of the purchase price that seeds or tubers sold are as described on the containers within recognized tolerances. Seller gives no other or further warranty express or implied."

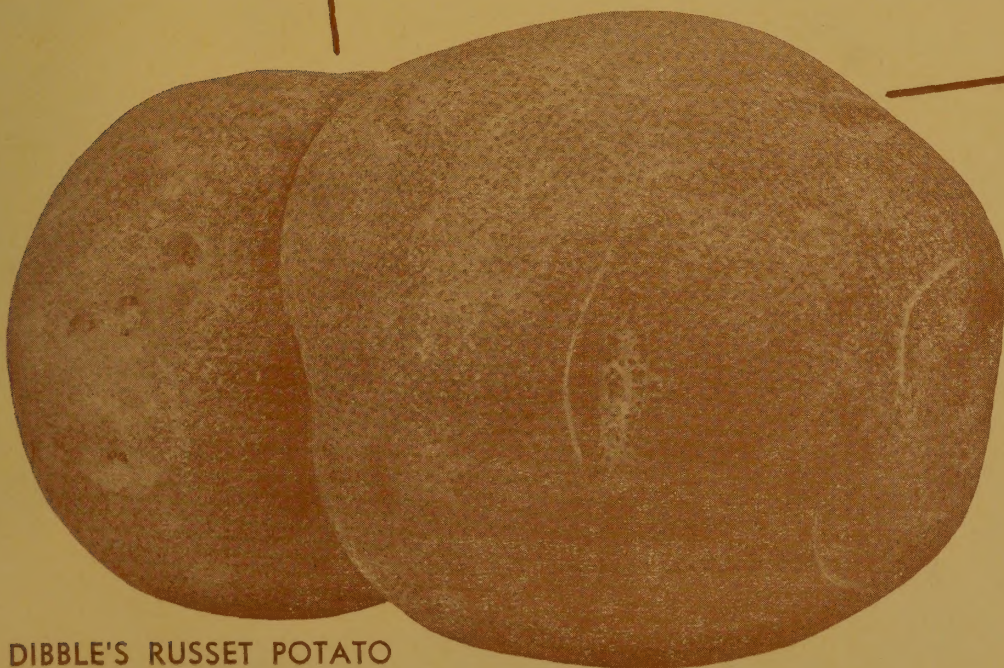

## POTATOES

### Late Varieties

DIBBLE'S RUSSET  
RUSSET BURBANK  
GREEN MOUNTAIN  
KATAHDIN  
SEBAGO  
KENNEBEC  
RED PONTIAC

### Early Varieties

CHIPPEWA  
IRISH COBBLER  
RED WARBA  
RED BLISS TRIUMPH  
NORLAND

DIBBLE'S RUSSET POTATO

# ALFALFA SEED

## CAYUGA

CAYUGA is a new alfalfa variety developed at Cornell. It was evolved to fit the need for a high yielding, fast growing variety similar to DuPuits, but with a longer productive life.

In Cornell trials, Cayuga has produced very high yields under intensive management (three harvests per year) on fertile, well drained soils that are adapted to alfalfa. Cayuga's recovery growth rate is intermediate between varieties like DuPuits and Ranger or Narragansett.

If harvest is unavoidably delayed, Cayuga can be cut later without developing the extreme coarseness that is characteristic of DuPuits.

Climax Timothy or Saratoga Bromegrass is recommended as a companion grass for Cayuga.

## NARRAGANSETT

NARRAGANSETT, with its ability to produce a high forage yield on problem soils, is the workhorse variety for New York. It does well on all alfalfa sites, but is markedly superior where drainage problems cut production and stand life.

Climax Timothy or Saratoga Bromegrass are desirable companion grasses.

## VERNAL

VERNAL is a high yielding bacterial-wilt resistant variety, well suited to long-lived stands. Vernal does well under most growing conditions. It is best suited to well-drained soils where a long-lived stand under two and sometimes three cutting management is desired.

## DUPUITS and ALFA

DUPUITS AND ALFA, Flamande-type alfalfas, are high yielding varieties on the fertile soils of the Northeast for stands up to three years. They start growth earlier in the spring, recover faster and continue growth later in the fall than other recommended varieties. On three cuttings (starting late May or early June) over five tons per acre may be expected.

Climax Timothy or Saratoga Bromegrass are suitable as companion grasses.

## RANGER

RANGER ALFALFA, a long-lived Alfalfa, is highly resistant to bacterial wilt. It is winter hardy and is therefore well suited to our Northeastern conditions where a long-lived stand is desired.

### HIGH YIELDING VARIETIES FOR THE NORTHEAST

## DIBBLE'S *Seed Oats*

### DIBBLE'S GARRY

The Garry Oat is still the predominant variety grown in New York State and continues to be an outstanding variety where black stem is not a factor. It is hard to beat for yielding ability.

The Garry Oat has exceptional stooling ability and maximum yields may be obtained by planting 2 bushels per acre.

### DIBBLE'S RODNEY

Rodney has proven to be a very desirable Oat for our Northeast territory. Rodney yields about the same as the Garry and has about the same height and stiffness of straw. It is five days later than Garry and has a very plump kernel. This makes it very desirable for crimping. Sow 2 to 2½ bushels per acre.

### DIBBLE'S RUSSELL

Russell is a new variety from the Central Experimental Farms, Ottawa, Canada. Overall performance of Russell may be expected to match that of Garry, which has an excellent rating. Observations in New York suggest that Russell may have more resistance than Garry to crown rust races found in the State—a potentially important feature.

### DIBBLE'S ONEIDA

Oneida is a high-yielding mid-season spring oat for the Northeast, released by Cornell. It was designed to give greater protection against black stem disease which has been responsible for severe stem break and lodging in other varieties.

## DIBBLE'S *Seed Corn*

### EARLY

100 days

Michigan 250

Mainly for grain production in New York State above elevations of 600 feet and early to medium seasons of the Northeast. Excellent for early silage producers.

### MEDIUM

110 to 115 days

Cornell M-4

Cornell M-3 (Outstanding New Variety)

Cornell M-10

Penn. 444

For grain in the good growing sections of western New York State and similar seasons of the Northeast. Excellent yields for silage at elevations around 800 feet in New York State and similar seasons of the Northeast.

### MEDIUM LATE

115 to 125 days

Ohio K-62

Ohio K-24

Extremely heavy silage producers for the good Corn-growing dairy sections in New York State and the Northeast. For grain in the best Corn-growing sections of the Lower Hudson, Long Island, Pennsylvania, New Jersey and Connecticut.

### LATE

130 days

West Branch Sweepstakes

Open-pollinated variety that produces high yield of silage in the best growing sections of the Northeast.

PRICES ARE F.O.B. HONEOYE FALLS, NEW YORK.

Dibble's D. B. Brand Alfalfa, Clover and Grass Seeds are the highest grade obtainable. Average analysis for years has been approximately 99.70% pure and an average of around 99.50% is guaranteed.

Every bag of Dibble's Alfalfa, Clover, Grass and Grain Seeds has a tag showing our Purity and Germination test. They are sold on a ten-day-money-back-if-you-want-it guarantee. Keep your seed ten days, test it, and if not entirely satisfactory in every way, return it at once. We will refund your money, paying the freight both ways, or refill your order. Is there a fairer way to sell, or a safer way to buy farm seeds?

WE QUOTE TODAY'S VALUES SUBJECT TO MARKET CHANGES.

| ONE-HALF PINT .. | (Enough for 1 bu. Corn) ..... | \$ .75 |

# 1963 SEEDINGS FOR HAY, SILAGE, AND PASTURE

Use only certified seed. Seldom should a farmer use only one variety. For high yields, choose the variety that best suits the mixture, the soil conditions, and the intended management and use for each field.

This is the best choice for high yields and early harvest on fertile, well drained soils.

Dupuits, Alfa or Cayuga alfalfa, 8 lbs.  
Orchard grass, 6 lbs. or Saratoga brome grass, 8 lbs. or Climax timothy, 6 lbs.

FIRST HARVEST DATE - Late May to early June.

ADDITIONAL HARVESTS - 2 to 3.

LENGTH OF STAND - 1 to 4 yrs.

Higher yielding than either alfalfa or trefoil alone on fields with spotty drainage patterns if soil pH is favorable for alfalfa.

Narragansett or Vernal alfalfa, 4 lbs. Viking early birdsfoot trefoil, 4 lbs. Climax timothy, 6 lbs.

FIRST HARVEST DATE - Mid-June.

ADDITIONAL HARVESTS - 1.

LENGTH OF STAND - 2 to 5 yrs.

Excellent for long-term hay or pasture on fields too wet for alfalfa. Rotation grazing is essential for longer stand life.

Viking early birdsfoot trefoil, 5 to 8 lbs.  
Climax timothy, 6 lbs.

FIRST HARVEST DATE - Mid-June.

ADDITIONAL HARVESTS - 1.

LENGTH OF STAND - 3 or more yrs.

A sound choice for longer-lived stands where very early first cutting is not possible or on soils with marginal drainage.

Narragansett or Vernal alfalfa, 8 lbs.  
Saratoga brome grass, 8 lbs. or Climax timothy, 6 lbs.

FIRST HARVEST DATE - Early to Mid-June.

ADDITIONAL HARVESTS - 1 to 2.

LENGTH OF STAND - 2 to 5 yrs.

Superior to alfalfa if either fertility, soil pH, soil drainage condition, or forage establishment are unfavorable for alfalfa.

Dollard or Pennscott red clover, 6 lbs. Climax timothy, 6 lbs.

FIRST HARVEST DATE - Mid-June.

ADDITIONAL HARVESTS - 1.

LENGTH OF STAND - 1 year.

Empire is about two weeks later than alfalfa or early birdsfoot trefoil. Essex timothy is one week later than Climax.

Empire late birdsfoot trefoil 5 to 8 lbs. Essex or Climax timothy, 6 lbs.

FIRST HARVEST DATE - late June to early July.

ADDITIONAL HARVESTS - 1.

LENGTH OF STAND - Semi Permanent.
